

K. S. U. International symposium

Frontiers in plant mitochondrial genome research

Thursday July 7, 2016, 13:15-17:25

Library hall, Kyoto Sangyo University, Kyoto, JAPAN

http://www.kyoto-su.ac.jp/facilities/cam_map.html, building P

Participation fee: Free

Program

- 12:30 - 13:15 Registration
- 13:15 - 13:20 Opening Remarks
- 13:20 - 13:50 Extensive structural variation among radish mitochondrial genomes revealed by complete sequencing of mitochondrial DNA (T. Terachi, Kyoto Sangyo U., JAPAN)
- 13:50 - 14:20 Evolution of post-translational mechanism suppressing cytoplasmic male sterility in sugar beet (*Beta vulgaris* L.) (T. Kubo, Hokkaido U., JAPAN)
- 14:20 - 14:50 Genetic analysis of fertility restorer locus on chromosome 10 derived from a wild rice (T. Kazama, Tohoku U., JAPAN)
- 14:50 - 15:20 Genes and mechanisms for mitochondrial shape, number and distribution in *Arabidopsis thaliana* (S. Arimura, U. Tokyo, JAPAN)
- 15:20 - 15:40 Coffee Break
- 15:40 - 16:30 Group II introns and complexities of splicing in plant mitochondria (L. Bonen, U. Ottawa, CANADA)
- 16:30 - 17:10 Organelle DNA degradation in leaf senescence: a possible role of organelle DNA as nutrient reservoir? (W. Sakamoto, Okayama U., JAPAN)
- 17:10 - 17:15 Closing Remarks

Organizer: Toru Terachi, Faculty of Life Sciences, Kyoto Sangyo University

Contact: Office, Faculty of Life Sciences, Kyoto Sangyo University, Motoyama Kamigamo, Kita-ku, Kyoto 603-8555, Japan, TEL: +81-75-705-1466

This work is supported by JSPS KAKENHI Grant No. 26292007 and Kyoto Sangyo University Research Grants
